## Fiber-Fiber ${ }^{\top M}$ Optical Switch

Full $2 \times 2$ \& $2 \times 2$ Bypass
(all fiber types, ultra-broadband, bidirectional)
(Protected by pending patents)

Features

- Low Optical Distortions
- High Isolation
- High Reliability
- Fail-Safe Latching
- Vibration Resistant
- Unmatched Low Cost

## Applications

## Protection

- Instrumentation

The FF Series fiber optic switch connects optical channels by a micro-mechanical fiber to fiber auto-alignment platform and activated via an electrical relay. The advanced design significantly increase the performance, offering unprecedented low optical loss, little wavelength dependence with no coatings, high power handling, as well as unmatched low cost. Latching operation preserves the selected optical path after the driver signal has been removed. The switch has integrated electrical position sensors. The switch is bidirectional and conveniently controllable by 5 V TTL.
Using no lens, the FF Series switch can accommodate all type of fibers, including SM. MM, PM, double cladding, bendable, large core, small core.
Lightpath in the device is bidirectional.

## Specifications

| Parameter | Min | Typical | Max | Unit |
| :---: | :---: | :---: | :---: | :---: |
| Wavelength | 350 |  | 2500 | nm |
| Insertion Loss ${ }^{[1]}$ |  | 0.4 | 0.6 | dB |
| Wavelength Dependent Loss |  |  | 0.1 | dB |
| Polarization Dependent Loss |  |  | 0.1 | dB |
| Polarization Extinction Ratio ${ }^{\text {[2] }}$ | 18 |  |  | dB |
|  | 52 | 55 |  | dB |
| Return Loss | $35^{[3]}$ |  |  | dB |
| Cross Talk | $60^{[3]} / 65^{[5]}$ |  |  | dB |
| Switching Time |  | 3 |  | ms |
| Repeatability |  |  | $\pm 0.1$ | dB |
| Durability | $10^{8}$ |  |  | cycles |
| Repetition Rate |  |  | 5 | Hz |
| Operating Optical Power |  | $0.5{ }^{[4]}$ | $0.5{ }^{[3]}$ | W |
| Operating Voltage | 4.5 | 5 | 5.5 | VDC |
| Operating Current (Latching/Non-Latching) |  | 30 | 60 | mA |
| Switching Type | Latching / Non-Latching |  |  |  |
| Operating Temperature | -40 |  | 80 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature | -50 |  | 90 | ${ }^{\circ} \mathrm{C}$ |

Notes:
[1]. SM 28 Fiber, Excluding Connectors. For MM fiber with laser CPR<14.
[2]. For PM fiber only
[3]. For MM fiber with laser CPR<14
[4]. For MFD $>=6 \mu \mathrm{~m}$ core fiber
[5]. For SM or PM fiber

## Full 2x2 \& 2x2 Bypass <br> (all fiber types, ultra-broadband, bidirectional)

#### Abstract

DATASHEET

Mechanical Dimensions (Unit: mm)

NOTE:

1) Full $2 \times 2$ has the fiber linkloop out of the package.
2) $2 \times 2$ bypass doesn't have fiber link-loop.

*Product dimensions may change without notice. This is sometimes required for non-standard specifications.

## Electrical Connector Configurations

Agiltron offers a computer control kit with TTL and USB interfaces and Windows ${ }^{\text {TIN }}$ GUI. We also offer the RS232 interface as an option please contact Agiltron sales.

Application Note: For the latching type, one can also apply a constant driving voltage that increases stability. The switches can also be driven by a pulse mode using Agiltron recommended circuit for energy saving.

Warning: The switch must be driven by the reference circuit otherwise the performance is unstable, due to the internal magnet that requires the current flow in the correct direction. The load is a resistive coil that is activated by applying 5 V (draw $\sim 40 \mathrm{~mA}$ ).

## Non-Latching Type

| Optical Path | Electric Drive |  |
| :---: | :---: | :---: |
|  | Pin 2 | Pin 3 |
| Port 1 $\rightarrow$ Port 1` & 0 & 0 \\ \hline Port 2 \(\rightarrow\) Port 2` |  |  |
| Port 1 $\rightarrow$ Port 2` & 0 & 5 V \\ \hline Port 2 \(\rightarrow\) Port 1` |  |  |

Latching Type

| Optical Path | Electric Drive |  |
| :---: | :---: | :---: |
|  | Pin 2 | Pin 3 |
| Port 1 $\rightarrow$ Port 1` & 5 V & 0 \\ \hline Port 2 \(\rightarrow\) Port 2` |  |  |
| Port 1 $\rightarrow$ Port 2` & 0 & 5 V \\ \hline Port 2 \(\rightarrow\) Port 1` |  |  |

[1]. The device is ultra-broadband limited by the fiber transmission. However, we only test at one selected wavelength to save cost. If customer needs to test at several wavelengths, the selection is special $=0$ with added cost.

## Fiber Type Selection Table:

| 01 | SMF-28 | 71 | MM 50/125 |
| :--- | :--- | :---: | :--- |
| 02 | SMF-28e | 72 | MM $\mathbf{6 2 . 5 \mu m}$ |
| 03 | Corning XB | 73 | $\mathbf{1 0 5 / 1 2 5 \mu m}$ |
| 04 | SM450 | 74 | FG105LCA |
| 05 | SM1950 | 75 | FG50LGA |
| 06 | SM600 | 76 | STP 50/125 |

| 09 | SM980 |  |  |
| 10 | Hi1060 |  |  |
| 11 | SM400 |  |  |
| 12 |  |  |  |
| 13 |  |  |  |

## Fiber Core Alignment

Note that the minimum attenuation for these devices depends on excellent core-to-core alignment when the connectors are mated. This is crucial for shorter wavelengths with smaller fiber core diameters that can increase the loss of many decibels above the specification if they are not perfectly aligned. Different vendors' connectors may not mate well with each other, especially for angled APC.

## Fiber Cleanliness

Fibers with smaller core diameters ( $<5 \mu \mathrm{~m}$ ) must be kept extremely clean, contamination at fiber-fiber interfaces, combined with the high optical power density, can lead to significant optical damage. This type of damage usually requires re-polishing or replacement of the connector.

## Maximum Optical Input Power

Due to their small fiber core diameters for short wavelength and high photon energies, the damage thresholds for device is substantially reduced than the common 1550 nm fiber. To avoid damage to the exposed fiber end faces and internal components, the optical input power should never exceed 20 mW for wavelengths shorter 650 nm . We produce a special version to increase the how handling by expanding the core side at the fiber ends.
